the Company of STATIONERS.

Merlinus Liberatus

The INTRODUCTION.

IS not the Growth of Fame as secret and insensible as that of a Tree? And are not our Minds, when Children, rude and ignorant, yet by Education reduced to Knowledge, the Progress we make therein, be not computable every Day and Hour. But after a certain Time both the corporal Growth of the Body is perceived; and the Progress which the Mind hath made in Learning and Experience is manifest. Whence it appears that these Things are subject to Time, which is nothing but an insensible and indivisible Progression of Minutes whose Progress is the Measure and Number of all Motion; so that what at first could not be perceived, is after a while as manifest as Noon Day. This is all the Account can be given of the Stars, for the Effects of the Stars and Planets are not perfectly perceived, tho' their Motions and Influences cease not, seeing they operate insensibly and constantly. And what Time seems (to us) to bring forth is caused by and must be ascrib'd to their Motions and Configurations. The Heat and Light of the Sun which redeems us from so much Darkness is generally acknowledged, but the Operations of the Rest of the Planets are not perceived because they are not all equally hot, nor have that Majesty of Light, and their Qualities differ, but are like Lamps, which can neither cast forth any sensible Heat, nor shed such a Light as can enlighten fully those Places which they are set in. Mr *Boyl* was inclin'd to believe the Influence of the Planets, see *Harris's Lexicon* Tech. Vol. 1, under the Word Influence. And —

*The Stars by Order in a silent Story,
Declare the Greatness of their Maker's Glory.*

And that our *Merlin* might be the most Serviceable of its Kind, we had design'd this Year to have presented our Readers with the Rising and Setting of the Moon, but other Things offering, we must beg their Patience (for want of Room) 'till the next Year, when they may expect it, with every Thing both Pleasant and Profitable to our Buyers, wherein we promising they have every Thing more correct and full, than in any other of this Kind, and shall be continu'd as long as God preserves Life and Health; so 'till the next Year — Farewel.

The Protestant Remembrancer continued.

THE Apostle *Thomas* was once under a Suspicion that the Senses of all the Apostles were impos'd upon by some Phantasm, he was not sure it seems, but the Accident of a Body might delude him, he was afraid lest he should embrace a Cloud instead of a real *Juno*, and therefore, unless he shall see in his Hands, the Print of the Nails, and thrust his Hands into his Side, he will not Believe: There are many Umbratile Appearances in the World, and he will have good Security for his Faith, before he Mortgages it upon such Evidence: Now Christ thought he made a rational Appeal to his Senses, *Reach hither thy Finger, and behold my Hands and reach hither thy Hand, and thrust it into my Side, and be not Faithless, but Believing*, John 20. 24, 25, 26, 27. If Seeing and Feeling will not satisfy him, I know no Remedy: he must stand to the Peril of his own Incredulity. All Christ's Miracles, were such as durst Appeal, and would Approve themselves to the severest Inquisition of the Senses, and abide the strictest Examen of the most critical Beholders. The first famous Miracles which he wrought in *Cana*, John 2, convinc'd the Governor of the Feast, that what had been real Water was now as real Wine: He knew not whence it was, but he well knew what it was; We will suppose that after this Transmutation, the Water had still retain'd its Form, Colour, and Taste, with all the external Species, the Governor would then have answer'd truly but for the Name of Wine, one had as good Drink fair Water, and if these be your Miracles, every Spring will create as Useful ones; but his Miracles carried his own Credentials along with it, justifies itself to the most exact Trial of the Senses, and received this Testimony, that not the best Water, but the best Wine was kept to last. Of all the Men in the World, I wonder our Chymist, who have so long been hammering their Heads for the Philosophers Stone, to turn all Metals into Gold, could never light upon this excellent Knack, for by this Device we might have gull'd into a Belief, that Copper is Gold, Tin Silver, that the Mines of *Sweden* are equal to those of *Potosia* in *Peru*, and that *Leaden-Hall* trades in as good Metal, as *Goldsmiths-Hall*, tho' it offers nothing but Leather Money stamp'd with an authentick Signature, tho' I doubt his Holiness will be loath to be paid in such Coin.

IN the Lying News-Papers published in *Apr.* 1735, it was there affirm'd that the Almanack Writers were all mistaken in the Time of the Celebration of the Holy Feast of *Easter*, this presently took Wing, and almost every Body had got it in their Mouths how that they were impos'd upon by keeping of *Easter* a Week later than the Rule in the Common Prayer Book had established it : The Rule says, *Easter-day* (on which the Rest depends) is always the first *Sunday* after the first full Moon, which happens next after the 21st Day of *March*. And if the full Moon happens upon *Sunday*, *Easter-day* is the *Sunday* after. This Rule held good for many Years after the Time of the *Nicene* Council, which was in the Year of our Lord 322, but because the Account that we keep, agrees not with the apparent Motion of the Sun, our Account is called the *Julian*. or *old Stile*, instituted by *Julius Caesar*, about 45 Years before the Incarnation of our Blessed Saviour, perceiving the Lunar Year to contain only 354 Days, he, by the Advice of *Sofigenes* (an able Mathematician, whom he brought with him

from *Alexandria*) added 11 Days and 6 Hours; thereby reducing the Year to the apparent Solar Course, making it to consist of 365 d. 6h. which 6 Hours every 4 Years makes the *Bissextile*, or *Leap-Year* of 366 Days; whereas the other 3 intermediate Years contain only 365 Days, and this is that which is called the *Julian* Year, and is still retain'd by all the *European* Protestants : The *Julian-Year* exceeds the Tropical Year by 10^l 57^l 45^ll, therefore in 132 Years it will amount to one whole Day, see *Leadbetter's Uranocopia*, Page 173. If we divide the Years from the Time of the *Nicene Council*, to 1736, viz. 1414, by 132, we shall have 11 (nearly) which are the Days that the *Gregorian*, or *New Stile* is before ours, for so much has the Vernal Equinox gone back since the *Nicene Council* to this Time. And this is the Reason that the Rule in the Common Prayer Book often fails in this Age : But it is not by that Rule that *Easter* is observed in *England*, but by the Table of the *Gouaen Number*.

(Which Tables is in most Common Prayer Books,) being made up of the Solar Cycl 28 Years, and of the Lunar 19 Years, which multiply'd together makes 532; the Revolution of *Easter*, in that Time, *Easter* falls four Times upon the 23th of *April*, which is the Highest it can ever fall, and four Times upon *March* 22, which is the Lowest that it can ever fall, as you may see by the Table above. The last Time *Easter* fell so high, that it doth this Year, was in the memorable Year 1641, and it will not fall so again 'till the Year 1983, that is 247 Years yet to come. In the Year 1668, *Easter-day* fell upon *March* 22; but it will not fall so again 'till the Year 1915, that is 179 yet to come. Mr *Hatton* in his Mathematical Manual, Page 59, finds fault with Mr *Cole* in his *English Dictionary*, under the Word *Shrove-Tide*, says that *Shrove-Tuesday* is the first *Tuesday* after the first New Moon that happens after *January*: This fail'd in the Year 1709; and, to mend the Matter he gives us his Rule, which says *Shrove Sunday*, is always the first *Sunday* after the second Change of the Moon, which happens after *New-Year's-Day*; and if that Day of the second Change be *Sunday*, then that *Sunday* is *Shrove-Sunday*. Now I must acquaint my Reader, that Mr *Hatton's* Rule is as much erroneous as Mr *Cole's*, for it fail'd in 1671, and in 1736, &c. it is not by either of these Rules, that the Church of *England* observes that great Festival, but by the Table in the Common Prayer Book for finding *Easter* for ever, as mention'd above: The Table in the Common Prayer Book shewing the Movable Feasts for 40 Years ends with the Year 1740; therefore I shall give you the Times of *Easter* as observed by the Church for the next 40 Years to come, and had I Room, I would have given all the Movable Feasts and Common Notes for that Time as is usually done in that Table, calculated in the Common Prayer Book, but for want of Room I must beg the Reader to accept of *Easter-day* only, 'till another Opportunity. *Ecclesiasticus* 43. 7.

A Table of the Terms and their Returns, 1756

Hillary-Term begins Jan. 23, ends Feb. 12.

Returns, or Effoin days.	Exc. da.	R. B. App. W. Da.
On the Octave of St. Hilary, Jan. 20	21	22 23 Fri.
In 15 days from the day of St. Hil. 27	28	29 30 Fri.
On the morrow of the Purificati- on of the blessed Virgin Mary, } Feb. 3	4	5 6 Fri.
On the Octave of the Purificati- on of the blessed Virgin Mary, } Feb. 9	10	11 12 Th.

Easter-Term begins May 12, ends June 7.

In 15 days from the Feastday of East. May 10	11	11 12 W.
In 3 Weeks from the Feastday of East. 17	18	18 19 W.
In 1 month from the Feastday of East. 24	25	25 26 W.
In 5 weeks from the Feastday of East. 31	1	1 2 W.
On the morr. of the Asc. of our Ld. June 4	5	5 7 M.

Trinity-Term begins June 25, ends July 14.

On the morrow of the holy Trin. June 2	22	23 25 Fr.
On the Octave of the holy Trinity, 28	29	29 30 W.
In 15 days from the day of holy Tr. Jul. 5	6	6 7 W.
In 3 weeks from the day of holy Trin. 12	13	13 14 W.

Michaelmas-Term begins October 23, ends Nov. 29.

In 3 weeks from the day of St. Michael, Oct. 20	21	22 23 Sa.
In 1 month from the day of St. Michael, 27	28	29 30 Sa.
On the morrow of All Souls. Nov. 3	4	5 6 Sa.
On the morrow of St. Martin, 12	13	15 16 Su.
On the Octave of St. Martin 18	19	20 22 M.
In 15 days from the day of St. Martin, 25	26	27 29 M.

N. B. No Sittings in Westminster-Hall on Ascension Day, Midsummer-Day, the 1st and 2d of November, and the 2d of February.

The Exchequer opens Eight Days before any Term, except Trinity; before which it opens but Four Days. Note, That the first and last Days of every Term, are the first and last Days of Appearance.

January hath XXXI Days.

Welcome kind Reader unto *New-Year's-Day*,
When *Mars* with *Venus* doth most wanton Play :
And thence the King of Stars to *Jove* doth hie,
As if they'd hold a Counsel in the Sky.
But *Saturn* his black Curtain spreads, his Might,
Commands that not one Star shall them affright.

Auscult to co-silium, & accipio eruditio ut Sapiō in dies tuus ultimus, Prov 19, 20.
 The Year is usher'd in with two Conjunctions of Note, God direct the Prudential Consultations of our English Governor, and Governors, by what Title, or Titles, now nominated; and grant Unity amongst them. Some petty violent Spirits asperse the present Happiness of our Nation; and a little Disturb us with scandalous Libels, pernicious Tenets, or infamous Books and Queries. France disquieted, with numerous, but not serious Results; Peace seems yet not to attend that
 The 20th Day of this Month, 1736, was born His Royal Highness Frederick, Prince of Wales.
 Nation: Rather War, Armies and Invasion offend the haughty People. An old Statesman is about this Time, either called in Question, or not so well respected as heretofore:

February hath XXIX Days.

Under dark Veil *Mars* hides himself a while.
 Resteth his Sword, his Head-piece fills with Guile;
 For sometimes he doth act the Statist too,
 Soon after he will let us know what he can do.
 Blood, Fire and Sicknes too, he doth dispense;
 Such seems to be his malign Influence.

This Month begins with fair Pretensions, sugar'd Words, Promises or Hopes of great and gracious Actions, many Grave Senators with serious Deliberation, intending to determine great Designs or Disputes with Love and in Peace. But on a Sudden a strange Alteration in Mens Minds and Affections, and the Face of the present Times seeming in great Danger of Confusion; some more private Counsels or Consultations, or Dislikes, now manifest themselves; and there are not wanting sturdy Blades, or confident Men to maintain them.

A Marriage of Note seems The 22 Day of this Month, 1722, was born the Prince's Mary.

now to be on foot, and will possibly tend to the Advantage of both Parties. Every busy Spirit maintains his peculiar Design, by pretending unto Religion: Witty Men are these that produce Religion to confirm, or countenance reasonable Acts against Authority.

March hath XXXI Days.

On the first Day near Noon the *Sun* doth vail
Part of his Face near to the *Dragon's Tail* :
By *Luna's* Opacke Body doth foreshew
Some great Man's Death ; (if Authors say be true.)
Great Potentates God's Hand cannot Stave ;
Princes and Peasants levelled are i'th' Grave.

Monthly Observations.

The first Day of this Month 1682, was born our Gracious Queen *Caroline*, whom God long preserve for the Good of Protestant Religion in Great Britain in particular, and over all Europe in general.

Here are no less than three Eclipses of the Luminaries in this Month, (tho' but one visible) will produce much subsequent Action: The Places under the Eclipsed Signs are, *Austria, Portugal*,

On the 14th Day of this Month was married the *Prince, Royal*, to His Royal Highness the Prince of *Orange*.

England, France, Germany, Poland, Denmark, Naples, Vienna, Lisbon and Brunswick, so that if by this Time there is not a Peace concluded, it is expected some more than ordinary Matter or Thing to break out in those Parts of the World Many fly Pieces of Reguery will about this Time be brought to light, and the Actors thereof brought to c dign punishment.

July hath XXXI Days

Jove Retrograde, the Sun doth him oppose,
And perverts Justice (some say) and that those
Should Right administer, will do Men Wrong;
But that's no News, for we have known it long.
Now Conscience is cast off as out of Use.
Right is the Cloak of Wrong, and all Abuse.

August hath XXXI Days.

Of Plague and Fire *London* hath had her Lot,
 Let Days now past by her ne're be forgot;
 Whilst Saturn transits the Sign Gemini,
 And Mars abode in Aries, all Year will be
 Seditions, Murders, villanous Robberies,
 Obnoxious Diseases too, they signify.

September hath XXX Days.

Sol now descends to Libra, and doth weigh,
The World our equal Shares of Night and Day;
He's in his Fall, and therefore often shrouds
His glorious Head behind the Veil of Clouds,
Which to dispel and clear the muffled Sky.
Æolus puffs, and makes the Winds blow high.

November hath XXX Days.

The Grand Configurations which are now,
 Doth cause a stately Ceder for to bow.
 Some for to satisfy a lewd Desire,
 Cut down an Oak, and yet let go a Bryer.
 A Tyrant is a Rod and Serpent too,
 And brings worse Plagues than Egypt ever knew.

PARTRIDGE, 1736.

Astrological Observations on the Year 1736.

Of the Brumal or Winter-Quarter.

WHich begins at such time as the Sun (apparently) enters the first Scruple of *Capricorn*, and falls this Year 1735, under the Meridian of *London* December 10^d 17^h 33', but the apparent Time is 1' 6" later; at which Time and Place we have 28° 40' of *Scorpio* ascending, and 23° of *Virgo* culminating, *Saturn* Retrograde in the sixth in *Taurus*, *Jupiter* in the second where the Sun is also posited, *Mars* and *Venus* in the 12th, *Mercury* in the Ascendant, *Moon* with *Cauda Draconis* in the 4 applying to a Square of the Sun, *Caput Draconis* in the 10th House of Heaven: here the two grand Rebels of the Sky are in Opposition from *Taurus* and *Scorpio*. With this Face do the Heavens behold the famous City of *London* at the Time above mentioned. First, the Opposition, *Saturn*, and *Mars* from Cadent Houses is of a mischievous Import to those Places under the Signs of *Taurus* and *Scorpio*, which are *Russia*, *Poland*, *Ireland* and *Persia*, and under *Scorpio* are *Norway*, *Bavaria*, and the Kingdom of *Fesse*, &c. The general Affairs of these Nations are in a deplorable Condition, the People much lamenting their impoverished Fortunes, their Penury, Misery, and late sustained Afflictions, some by leaving their Habitations, and forced to take their Flight into other Parts far remote; others by Damages received from the miserable necessitous Soldiers, where they have either resided or passed through.

Altho' the Winter Quarter is not convenient for Military Action, yet in Regard the *Moon* is in *Disces*, applying to Square, Sun, under the Earth with *Dragon's-Tail*, we may probably conjecture, there will be many Skirmishes as the Season will permit, when least expected

P A R T R I D G E, 1736.

expected, but these rather by Water than by Land, as Sea fights and of this Kind there may be many, some whereof will be managed with great Gallantry and Courage, for *Mars* is well fortified in *Scorpio*. and Joys to be there. Navigations (especially those towards the *West Indies* and the *Mediterranean*) will be very dang-rous, and subject both to Piracy and Surprise, or certain Shipwracks. If we consider the great ones of Nations, we find them much with unsettled and not well grounded Councils, great Differences in the Judgments of the most wise Senators of Nations and Kingdoms; the Exchequers of Potentates empty, and no willingness in their Subjects to supply or recrute them: *Venus* (in that false and malicious fixed Sign *Scorpio*) applying to an *Opposition* of Retrograde *Saturn* in the sixth House, and the in the twelfth House; these two H uses have signification of all Sorts of Cattle both great and small, by which we judge that a Murrain, or some other Disease will be very raging in this Quarter amongst the Cattle in general; and so I shall conclude the Quarter with the merry Frank of a *Scottish Joper* (from whom I had the Story) who could neither keep Clothes on his back, nor Money in his Pocket, but spent all he could rap and rend at the Ale Pot. One day sitting very pensive, said to himself: This Course of Life would never do. However he resolved to have one merry bout before he reformed, and getting a uil Glass of Nappy Ale in his Hand, held it out at Arms length and said:

Get thee from me,
Thou hast undone me;
Yet come to me, for I love thee.
Thou hast made my Friends my Foes;
Thou hast made me go with thread-bare Clothes;
But if I get thee to my Nose,
Then off thou goest.

Here he drinks it up, and resolves never to flinch from a Cup of the like Nappy Ale.

The Spring-Quarter

BEgins at such Time as the Earth enters the first Scruple of *Libra*, or (apparently) when the Sun toucheth the first Point of the Equinoctial Sign *Aries*, and continues while he passeth thro' *Aries*, *Taurus* and *Gemini*; *Mars*, *Venus*, and *Mercury* being chief Rulers thereof. The Days and Nights are now equal all the World over, except under the *Poles*. The Sun has now neither Declination nor Amplitude, the Sun's Meridian Altitude is now equal to the Complement of the Latitude of the Place of your Habitation, at *London* it is $38^{\circ} 26'$, at *Cronon* $36^{\circ} 38'$ and at *Paris* $41^{\circ} 15'$: But the *Moon's* Meridian Altitude (by Reason of the Obliquity of her Orb) differs much from that of the Sun's. (See *Leadbetter's System of the Planets* demonstrated, Page 85.) Now the Time of this Vernal Ingress falls this Year 1736, on *Shrove Tuesday* 29th 40th past 7 in the Morning; at which Time we have 17° *Aries* Ascending, and 20° *Capricorn* culminating, *Saturn* in the Ascendant in *Square* to *Venus* in the Eleventh House with *Jupiter*, *Dragon's-Tail*, *Sol*, and *Mercury* Retrograde in the 12th in *Sextile* to *Mars* in the Tenth, who is in *Trine* to *Saturn*. The *Moon* in the Second applying to a *Square* of the *Sun*: five of the seven Planets are above the Earth: now we may conclude *Saturn* and *Mars* to be chief Rulers or Lords of the Vernal Quarter, in regard they are Angular, and *Mars* in his Exaltation, they being Powerful and agreed to do Mischief. *Mars* threatens Wars, Differences and Debates in the Southern Parts of the World; Men shall be weary of those heavy Burthens imposed upon them, there will be many Fevers and other Distempers to afflict the Bodies of Mankind. We have no Encouragement from hence to predict the Wars beyond Seas are ended, but rather very like to continue longer; for in the Years 1734 and 1735, tho' many Persons, Soldiers, and eminent Commanders have lost their Lives, yet Providence seems not to have

PARTRIDGE, 1736.

have decided the Grand Controversie. — One Field Fight would turn the Scales, &c. which yet seems to hang in a Manner equally ballanced. *England's* Horoscope is intercepted in the 12th House; this signifies fixed Quarrels and Contentions, long lasting Wars or Miseries, and especially the Death of great Cattle. We could wish the Wars of *Europe* were determined, but such is the Ambition and vain glorious Designs of Grandees, we cannot expect any happy Conclusion: *Venus* in the 11th, in *Square* to *Saturn* in the Ascendant, denotes many mischievous Rapes, and vile Actions both in City and Country: Those Persons that have *Mars* in their 10th and *Scorpio* ascending, will be more sensible of his Influence now than at other Times. Some time ago I light of the following Paradox amongst some loose Papers written by an unknown Hand, which for its Variety I shall here present, believing it will not be unacceptable to my Country Reader.

*When I first Created was, unto this mortal Life,
I to a Man Married was, and made his lawful Wife;
With him I lived many Years, and many Children had,
Which did my Father much content, and made his Heart
full glad.*

*But yet I died ev'er I was born,
Which was the Wonder most,
When e'er my Mother brought me forth,
I yielded up the Ghost.*

The Summer-Quarter.

BEgins this Year *June* 10th, 43' 39" past 6 in the Morning, making the longest Day to all the Northern Inhabitants at *London* 16^h 26', at *Cromton* in *Lancashire* 16^h 46'. We have 12° of *Aries* culminating, and 4 of *Leo* Ascending, *Sol*, *Saturn* and *Venus* in the 11th *Mercury*, in the 12th in *Trine* to *Mars* in the 9, *Jupiter* Retrograde in the seventh, and the *Moon* in the

PARTRIDGE, 1736.

the 5th intercepted in *Sagittarius*; indeed the *Dragon's Head* and *Tail* are in their Joy, but the Planet are but meanly posited. Now expect to hear of new Divisions breaking out (if not happily prevented) also notable Complaints and dangerous Accusations against great Persons, carried on with much Vigour and Courage; old Crimes will be new revived, and those Persons that know themselves guilty, ought now to look about them most warily. *England's* Horoscope is on the Medium Cœli, gives her great Courage and Honour in her Councils and Undertaking, but *Mars* and *Dragon's Tail* in the 9th House shew many Mischiefs at Sea, by Pyrats and bad Weather, or Sea-fights. The Triple Conjunction of *Saturn*, *Jupiter* and *Mars* in *Sagittarius*, *Spain's* Ascendent, is still operating; we shall now find by Experience, that there is no resisting the Decrees of Heaven, and those Vices which are Passions in some Men, are mere habits in others, for those Persons who were born in a Storm will find it very troublesome to live in a Calm; they will be active tho' to their great detriment, and sometimes total Ruin. Who then can pity such Persons, who delight to make their Lives miserable? The *Moon* is in Conjunction with that violent fixed Star the *Scorpion's Heart* in the fifth House. Many Ambassadors will be employed from one Prince and Court to another. God Almighty direct the Hearts of such as sit at the Stern of Government, and give the Subjects Patience and willing Minds to Obedience. In *June* there happens a Square of *Mars* and *Venus*, and an Opposition of *Sol* and *Jove*, and of *Jove* and *Venus* in *July*, and in *August* Conjunction, *Venus*, and *Sol*, Square, *Saturn*, and *Venus*, with an Eclipse of the Sun, and the Quarter concludes with a great Eclipse of the Moon. The Effects of these Positions will be according to the Nature of them variously dispensed among Mankind, as there are Aspects and Bodies concerned in it. And Authors say, if *Mars* shall be in *Gemini*, it signifies great Impediments to Men, by Reason of Thunder, Lightnings, Scarcity of Waters, and excess of Heat, and its Unwholsomeness; and there shall be Wars, Contentions, and Robberies in the Northern Parts.

PARTRIDGE, 1736.

*You that board Corn, in Hopes it will be dear;
Go bring it out, scorn not a plentiful Year;
Lend them that want, th' Almighty sav' resth such,
And in short Time repays them twice as much.*

The Autumnal or Harvest-Quarter.

BEgins this Year September the 11th Day, at 3' 54" past 8 o'Clock at Night. We have the last Degree of *Capricorn* Culminating, and the first of *Gemini* Ascending, *Jupiter* Retrograde in the 10th, *Dragon's Tail* in the 11th, *Mars* and *Luna* in the 12th, *Saturn* in the first, *Dragon's Head* and *Sol* in the fifth, *Venus* and *Mercury* in the sixth House of Heaven; *Venus* in *Trine* to *Jupiter* and ad *Trine*, *Saturn*, also a *Trine* of *Saturn* and *Mercury*: three of the Planets are above the Earth and four below: The Moon has lately suffered a very great Eclipse in the last Decanate or Face of *Pisces*, this signifies seditious, cruel, and inhuman Actions of Soldiers, Sea Fights and great Death of those Animals as live, or frequent the Waters. *Guido Bonatus* fol. 558 says, if *Saturn* be in *Gemini*, or in the airy Triplcity, People will be subject to Agues and such like Infirmities, which proceed from cold and dry Causes; Men will be contentious and given to Actions of the baser sort, whence it will be feared there may arise some Bloodshed, or perhaps Duels, in or about the City of London; but in regard *Mercury* is in *Trine* to *Saturn*, it may only end in verbal Controversies or Paper Battles. *Jupiter* is but weakly posited in the 10th, from whence we may judge the Gentleman of the long Robe will be much perplexed and harassed about difficult Matters, and things of a high Degree, except *Venus's* friendly Ray mollify and soften the mischief impending. Five of the seven Planets are in the airy Triplcity, and *Mars* and *Luna* in the fiery; this is like to stir up a turbulent Season in general; but sith the Stars do not forcibly compel, but gently incline, we therefore hope, tho' several Rumours and Fears may be of Slaughter and Bloodshed, or that many dissatis-

PARTRIDGE, 1736.

Persons may desire such a thing, yet we hope the Prudence of a wise King, and the Foresight of a grave Council, may prevent any such Accident to happen, to which we hope all true Protestants will say *Amen*. I am apt to believe that there are many of my Country Readers that never either saw a crowned Head, or the Crown of *England* itself; I will here for their Satisfaction give them the Names, and Signification of the 12 Precious Stones that are in the Crown of England from *Callope's Cabinet* opened Page 1.

First, *Topazion*, it contains the Colour of most Precious Stones, and by which the King is warned to exercise all Virtues.

2. *Smaragd* or *Emeraud*, so green as it exceeds all Herbs, it represents Justice in the King.

3. *Sardius*, it is in Colour like unto red Clay, which is in the Top of the Diadem; for the King to consider, tho' he is the highest, yet he is but Clay.

4. *Cryselith*, it shines like Gold, sends as it were forth Flames; this exhorteth the King to shine in Wisdom and Prudence.

5. *Onyx* or *Calcedon*, being strong and hard by Nature; shews that the King should be of Fortitude and Courage of Mind in the Government of his People.

6. *Faciens*, it sheweth like Water, the Sun shining upon it; it teacheth Temperance and Sobriety.

7. *Jasper*, it is like a dark or Grass-green colour; this teacheth the King to provide for the Diet and Plenty of his People more than for his own.

8. *Crisopalle*, of the colour of Gold somewhat mixed with Green; the Gold admonisheth Wisdom, the Green warneth him to aspire Heavenly things.

9. *Berill*, Green and Pale; this persuadeth Heavenly Contemplation, and that he ought not to be corpulent by Epicurism.

10. *Saphire*, is of a light Blew; this instructeth the King to Continency.

11. *Amethyst*, it is decked with Purple and Violet; the Purple bids the King to discharge his Royal Function, the Violet to give a good Savour.

12. *Sardonix*, is black in the Bottom, red in the middle

PATRIDGE, 1736.

and white above, and instructeth the King to humbleness, Charity, and Sincerity. See *Exodus* 28. 17, 18, 19, 20. and *Chap.* 39. 10, 11, 12, 13. and *Revel.* 21. 19, 20.

His Ensign : 1. A Mound or Ball of Gold with a Cross on it, sheweth to the King, that the Religion of Christ ought to be revered throughout all his Dominions. 2. Scepter shews Justice. 3. Sword denotes Vengeance. 4. Ring, noting Faithfulness. 5. Bracelet, which is for good works. 6. Purple Robe is for Reverence. 7. Diadem, which is for Triumph.

Of the Eclipses that will happen in 1736.

Six times to the Inhabitants of this Terraqueous Globe will the two great Lights of Heaven be eclipsed, four times the Sun invisible, and two the Moon visible and Total ; they fall in the following order.

The first is an Eclipse of the Sun, on Monday, *March* the first at 35' past 2 in the Afternoon, but by Reason of the Moon's great North Latitude it will not be seen in England ; the Times of the General Eclipse happen thus :

	D.	H.	'	"	
Beginning 1736, <i>March</i>	1	1	5	33	} P. M.
Middle		2	31	46	
End		3	57	59	
Daration		2	52	26	

This Eclipse begins at Sun rising at *Quebec* in *North America* Lat. $45^{\circ} 8'$ N. Longitude $103^{\circ} 18'$ West. And the Eclipse ends at Sun setting near *Green Land* in the North frozen Sea, Lat. $80^{\circ} 8'$ Longitude $12^{\circ} 52'$ East. The Second is a great and total Eclipse of the Moon on *Monday* the 15th of *March* in the Evening as follows, according to a former Calculation of mine :

	D.	H.	'	"
Beginning 1736, <i>March</i>	15	10	6	45
Beginning of the Total Dark		11	3	46
Middle		11	51	33

True

P A R T R I D G E, 1736.

True Ecliptic <i>Opposition</i>	11 51 40	} P. M.
End of the total Darkness	12 39 20	
End of the Eclipse	13 36 21	
Continuance of total Darkness	1 35 34	
Total Duration	3 29 39	
Digits Eclipsed are	21 45 0	

This Eclipse falls in the tenth House ; it denotes the Death of Great and Noble Men a sickly Air with Tempestuous Storms of Hail.

The Third is an invisible Eclipse of the *Sun*, on *Wednesday, March 31*, at 59' 10" past 6 o'Clock in the Morning this will only be seen in the Southern Parts of the World the Times of the General Eclipse falls thus in Respect of the *Meridian of London*.

	D	H	'	"	
Beginning 1736, <i>March</i>	30	18	12	6	} P. M.
Middle		19	4	34	
End		19	57	1	
Duration			1	44	55

It begins at *Sun* rising in Lat. 81° 18' *South*, and Longitud 72° 38' *East*, this Place falls on the Globe in the unknown *Southern Ocean*. And the Eclipse ends at *Sun* setting in the Lat. 54° 2' *South*, and Long. 138° 57' *East* this Place falls also in the unknown *Southern Ocean*; the *Sun's* upper is touched by the *Moon's* lower Limb in the *Meridian* in the Lat. of 70° 15' *South*, and the Shadow of the *Moon* moves with a Velocity of 33 Miles in a Minute; but in the Eclipse of *March*, it only moved 31 Miles and an half in a Minute; and travels over 5421 Miles during the Eclipse.

The Fourth Eclipse is of the *Sun* invisible also, it happens on *Wednesday, August 25*, in the Morning, the Times of the General Eclipse are thus:

	D	H	'	"	
Beginning, <i>August</i>	24	19	28	19	} P. M.
Middle		20	58	17	
End		22	28	15	
Duration			2	59	56

This Eclipse begins at *Sun* rising in the Lat. 37° 52' *South*. and Long. 16° 49' *West*, this Place falls in the *Ethiopian Ocean*; and the Eclipse ends at *Sun* setting, in

P A R T R I D G E, 1736.

in the Lat. of $71^{\circ} 13'$ South, and Long. $92^{\circ} 47'$ East. This Place falls on the Globe in the unknown Southern Ocean. The Sun's upper is just touched by the Moon's lower Limb in the Meridian in the Lat. of $45^{\circ} 20'$ South, and the Shadow of the Moon moves over the Earth with a Velocity of 41 Miles in a Minute.

The Fifth Eclipse is of the Moon visible and total with Continuance on Thursday, September 9 in the Morn-
ing as follows.

	D	H	'	"	
Beginning 1736. Sept.	8	13	7	30	} P. M.
Beginning total dark		14	12	59	
Middle of the Eclipse		15	2	24	
True Ecliptic Opposition		15	2	40	
End of total Darkness		15	51	49	
Full End of the Eclipse		16	57	18	
Continuance of total Dark		1	38	50	
Total Duration		3	49	18	
Digits Eclipsed are		20	32	0	

This Eclipse falls in the Eighth House with Dragon's Tail, and Mars Retrograde in the 9th in England's Horoscope, Jupiter Retrograde in the sixth, and Saturn in the tenth; this Position in general signifies Seditious, cruel, and inhuman Actions of Soldiers, Sea-fights, &c. as we noted before.

The sixth and last Eclipse is of the Sun invisible on Thursday, September 23d, the Times of the General Eclipse falls thus:

	D	H	'	"	
Begins 1736 Sept.	23	3	35	14	} P. M.
Middle		5	13	55	
End		6	52	36	
Duration		3	17	22	

The Eclipse begins at Sun rising in the Latitude of $68^{\circ} 45'$ North, and Longitude $131^{\circ} 50'$ West, the Place falls in the unknown North Sea. The Eclipse ends at Sun setting in the Latitude of $33^{\circ} 56'$ North, and Longitude $16^{\circ} 17'$ West. This Place falls upon the Globe near Porto Sauto, one of the Canary Islands in the Atlantic Ocean; the Sun's upper Limb is just touched by the Moon's lower in the Meridian in the Latitude of $51^{\circ} 29'$ North.

PARTRIDGE, 1736.

In these four *Solar* Eclipses this Year the way of the *Moon* passes wide of the *Earth's* Disk, which is the Reason that they are all so small in themselves, and are all invisible at *London*; and the two *Lunar* ones being near Central is the Reason that they are so great as every one will see, if Clouds hinder not the observing of them.

Besides the six *Luminarian* Eclipses this Year, there will happen a famous Transit of *Mercury* over the *Sun*, on the 31st Day of *October* and visible if the Air be clear at *London*, as follows:

	D	H	'	"	
Beginning 1736, <i>October</i>	30	21	4	59	} P. M.
Middle		22	35	55	
End	31	0	6	51	
Total Duration		3	1	52	

At the middle Time of this Transit of *Mercury*, he may be seen on the upper Part of the *Sun*, not much unlike a Patch on a Lady's Face, and the *Sun* is then Vertical to the South West Parts of *Africa* in the Kingdom of *Mataman*; the Latitude of *Mercury*

Beginning	12	20	} North.
At Middle	13	20	
End	14	38	

Those that view this Eclipse with two Conver Glasses only, will see *Mercury* come on the West Side of the *Sun*, and go off the *Sun's* Disk on the East Side, the *Phænomenon* being inverted. Mr. *Whiston* makes the middle to be at 1ch 53' in the Morning. But from the *Caroline* Tables of Mr. *Street* the Eclipse begins at 45' 37" past 10, the Middle at 4' 8" past Noon, and the End at 21' 39" past 1 the 31 Day of *Octob.* See *Leadbetter's* compleat System of Astronomy, and his Treatise of Eclipses from whence we have borrowed these Calculations. Time will determine whether *Leadbetter* or *Street's* Tables come nearest the Truth. In the said Treatise of Eclipses Mr. *Leadbetter* has given us a curious Method for Determining the *Sun's* Horizontal Parallax at the time above mentioned, when *Mercury* transits the *Sun's* Disk, which is very curious and

PATRIDGE, 1736.

and worthy the Acceptance of all Lovers of Astro-
nomy.

Besides these six *Luminarian* Eclipses, and *Mer-*
cury being seen in the *Sun* as mentioned above; the
Moon will make a near Appulse to the Planet *Venus* on
April 27, a little before Noon, which will not be seen
in *England*, nor indeed any where else. They have
both *South* Latitude. And on *October 7*, near Midnight
the *Moon* will eclipse the Planet *Mars*. but more cor-
rectly according to the following Calculation :

H. ' "

Octob. 2 { *13 18 32 E. Time* } in *Aries*, *17° 8' 30"*.

The *Moon* passes wide of *Jupiter* all this Year, viz.
above; and under the Planet *Saturn* at every *Conjun-*
ction. Of all the Planets *Mars* is said to be of the *Tory*
Party, if so, this seems as if those impudent Jacks
should have a Curb for their Insolence now about, or
near this Time. Let them go on, give them Halter
enough and they will hang themselves, and so cheat
Jack Ketch of his Fees.

Popish

PATRIDGE, 1738.

Popish Trinkets and Devices.

1. **H**oly Water, which is to scare the Devil away; who is (you may be sure) wonderfully afraid of it. This Water is far more precious than *Bath, Epsom,* and *Barnet* Water. With this they sprinkle themselves in the Morning and then they are secure all Days; except a pretty Girl come in their Way, and then the Holy Water is forgot.

2. Beads, whereby to number their Prayers, for it is no great Matter what they mind what they pray for, so that they know the Number of them. This puts me in Mind (says my Author) of the Story of a Fellow to whom *Saint Barnard* had promised his Horse, if he could say the whole *Pater Noster* and think of nothing else; to which the Fellow agreed; but when he had said it half way, he asked *St. Barnard* if he must have the Saddle too? And so by that Means lost them both.

3. A Stole, is a Neck-habit, sanctified by his Holiness at *Rome*, and made much after the Manner of a Tippet: With such a Trinket did *St. Romain*, tied about a Dragons Neck, make him tame and lead him Prisoner therewith from his lurking Place to *Rouen*. This was not the Dragon that *St. George* slew.

4. Aubes or Abbes, be Priests Garments of white Linnen down to their Feet, girded about their Middle; the thin Matter denotes Simplicity, Colour Purity, Length (deep Divinity) Perseverance; and the Tincture thereof signifies the Person wearing it prompt and prepared for God's Service.

*Thus they have Fig leaves for to cover Sin,
And yet all cannot hide the Knave within.*

5. The Rood is an Image of *Christ* on the Cross, made generally of wood, and erected in a Loft for that Purpose, just over the Passage out of the Church into the Chancel. And wot you what spiritual Mystery is concluded in the Position of it: The Church (forsooth) typifieth the Church Militant; the Chancel represents the Church triumphant, and all who will pass out of the former into the latter, must go under the Rood Loft; that is, carry the Cross and be acquainted with Affliction. These and many more you must have to make a compleat Papist.

PARTRIDGE, 1736.

A TABLE of the true Appearances of *Jupiter's* Satellites at Ten o'Clock every Night in *August* this Year 1736. *Jupiter* in the *Nonagesima* Degree *July* 29. and on the Meridian *Aug.* 22, at Ten o'Clock at Night. They are inverted here.

DR. Partridge's Night Drops, Night Pills, Matther's Pill, and his other Medicines of his own preparing, continue to be sold as before by his Widow, at the *Blue Ball* in *Salisbury-street* in the *Strand*.

ARTIFICIAL TEETH, set in so firm as to eat with them, and so exact, as not to be distinguished from Natural: They are not to be taken out at Night, as is by some falsely suggested, but may be worn Years together: Yet are they so fitted, that they may be taken out and put in, by the Person that wears them, at Pleasure; and are an Ornament to the Mouth, and greatly helpful to the Speech. Also, Teeth cleaned and drawn, by *John Watts* and *Samuel Rutter*, Operators, who apply themselves wholly to the said Business, and live in *Raguet Court, Fleet-street, London*.

STEEL Trusses for Ruptures, Leg Trusses for fixed Tumours, Back Irons, and other Instruments for the Lame or Crooked: By *Peter Barilett*, Steel Truss-Maker to the Fleet at *Chatham*, for the Help of his Majesty's Seamen; at the *Golden Ball* in *S. Paul's Church-Yard*, near *Cheapside, London*.

Persons in the Country, fencing their Rigs is, and which Side the Rupture is, may be supply'd with the Trusses, and proper Directions.

His Mother, *Mrs. M. Barilett*, at the *Golden Ball* in *Fleet-street*, near *Fleet-Bridge*, is skilful in this Business to her own Use.

Printed for *T. LONGMAN*, at the Ship in
Paternoster-Row.

A New Practise of Physick; wherein the various Diseases incident to human Bodies are orderly described, their Causes assigned, their Diagnosticks and Prognosticks enumerated, and the Regimen proper in each delivered; with a competent Number of Medicines for every Stage and Symptoms thereof, prescribed after the Manner of the most eminent Physicians among the Moderns, and particularly those of *London*; the whole formed on the Model of *Dr. Sydenham*, and executing the Design of his *Processus Integri*, in Two Volumes, Octavo. By *PETER SHAW, M. D.*
